

Hadi Hamedian

Senior .NET Developer | Technical Lead | AI & LLM Integration | Distributed Systems
Remote (GMT+3:30) | Hamedian.hd@gmail.com | [Portfolio](#) | [GitHub](#) | [LinkedIn](#)

SUMMARY

Senior .NET Developer with 10+ years of experience building scalable, cloud-ready applications and distributed systems. Fully remote (GMT+3:30), experienced in backend architecture, microservices, and AI/LLM integration. Hands-on expertise in Semantic Kernel, RAG, and modern .NET technologies to deliver intelligent enterprise applications.

WORK EXPERIENCE

Senior .NET Developer & Technical Lead at [Nexttotech](#) – UAE (Remote) Oct 2023 – Dec 2025

- Led backend technical design for a new FinTech platform ([Persian Forex Academy](#)) using .NET, Microservices, and Clean Architecture.
- Implemented distributed APIs with Redis, Docker, EF Core, and background jobs.
- Collaborated with multiple teams to deliver scalable backend features.
- Worked as a Backend Developer across two additional teams, implementing APIs and improving system reliability.
- Built **ExchangeRateProvider**, a rate aggregation module that collected exchange rates from multiple sources via an admin-defined configuration. The system applied custom aggregation algorithms, published results to **RabbitMQ**, and exposed data to clients via **WebSocket** and **HTTP** endpoints with authenticated access.
- Developed **OpenDuckly**, an installable SDK providing interactive API documentation and test execution, combining features similar to Swagger and Apidog. It allowed projects to expose their APIs with live testing, configuration, and auto-generated documentation.

Freelance .NET Developer – Remote Sep 2021 - Feb 2023

- Developed and maintained backend features and APIs for multiple client projects using ASP.NET Core and clean architecture patterns.
- Implemented authentication, API integrations, and optimized application performance.
- Modernized legacy codebases to improve scalability and reliability.

.NET Developer at [Jumbula](#) – US (Remote) Jul 2016 - Jul 2021

- Collaborated as part of a Scrum team of 10 .NET developers.
- Architected and owned a reusable reporting framework using CQRS and event-driven patterns, reducing report development time and enabling the delivery of 80+ distinct reports with 40% improved runtime efficiency.
- Developed backend APIs for mobile apps, ensuring seamless integration across 2 major platforms (iOS and Android)
- Mentored junior developers, guiding 5 team members.
- **Lead, Android & iOS (May–Jul 2016):** Led a mobile team building native apps for managing instructor classes at schools.
- **Lead, Hybrid App Team (Mar–Aug 2019):** Built an Angular framework for the staff dashboard across web and mobile.

SKILLS

Architecture & Design Patterns: Clean Architecture, DDD, CQRS & MediatR, Microservices, SOLID, Outbox Pattern

Core Backend: C# / .NET 8, ASP.NET Core Web API, EF Core, REST, JWT/OAuth2, Swagger, Background Jobs

AI & LLM: Semantic Kernel, RAG, Ollama, Qdrant

Cloud & Distributed Systems: Docker, .NET Aspire, RabbitMQ, MassTransit, Redis, API Gateway (Ocelot/YARP)

Cloud Platforms: Azure (App Services, Functions, Storage), Azure DevOps, GitHub Actions

Databases: PostgreSQL, SQL Server, MongoDB, Redis

Testing: xUnit, Moq, Integration Testing, Playwright

DevOps & Tools: Git, Serilog, ELK, Central Package Management

Frontend (Familiar): Blazor, Angular/TypeScript, HTML / CSS / Bootstrap

SELECTED PROJECTS

JobHunter.AI — AI-Powered Career Management Platform ([Repository](#))

Full-stack, local-first career assistant built with ASP.NET Core Minimal API, Blazor WebAssembly, and PostgreSQL, integrating local LLMs via Ollama (Llama 3.1). Features a three-stage Smart Analyze pipeline — LLM-based JD parsing, deterministic C# skill matching, and LLM-only experience reasoning — for accurate ATS scoring without hallucinated matches. Includes AI-powered Career Chat, a Resume Tailor module (Markdown → HTML → PDF), an Interview Prep Bank, and an Applications Dashboard.

ASP.NET Core · Blazor WASM · PostgreSQL · Ollama (Llama 3.1) · Semantic Kernel-style Pipeline Design · LLM Integration

AI Smart Assistant (.NET) — RAG-Based Document Q&A System ([Repository](#))

Retrieval-Augmented Generation system built on Clean Architecture and CQRS principles, using Semantic Kernel for orchestration and Qdrant as the vector store. Includes full test coverage (xUnit) and CI/CD pipeline via GitHub Actions.

Semantic Kernel · Qdrant · Clean Architecture · CQRS · MediatR · Docker · GitHub Actions

Distributed Microservice Platform — E-Commerce Microservices with AI Orchestration ([Repository](#))

Lightweight microservices architecture using .NET Aspire for service orchestration, MassTransit/RabbitMQ for async messaging, and Semantic Kernel for embedded AI capabilities, backed by PostgreSQL via EF Core.

.NET Aspire · MassTransit · RabbitMQ · EF Core · Semantic Kernel · PostgreSQL

EDUCATION

[Mohajer University](#)

Software Engineering, Associate Degree
